MY NEW BFF: SUPERAntiSpyware

© The Computer Tutor

Recently, **SUPERAntiSpyware Professional** literally saved the day. By doing so, it became my new BFF. And, here's why.

As you can see in the above screenshot, this program has advanced detection and removal features, as well as real-time protection and automatic updating. There are plenty of options for these features.

SUPERAntiSpyware Professional beats any and all other anti-spyware programs that I have ever tried, including those that I have previously reviewed. I still think that the other anti-

malware programs that I have previously recommended are good, but ***SUPERAntiSpyware Professional*** stands in a class by itself.

The "Enable Rescue Scan" feature is a great one for all PC users. It will cost me some business, but it will save the sanity of my customers when things go really bad on their computers.

I also like that I can set the frequency for updates. I currently have mine set for every two (2) hours, and you can even set it more frequently than that.

The "Scan Type" options are also superb. I especially like the "Critical Point Scan" when I'm on-the-go, but even the "Complete Scan" doesn't bog down my systems. The "Custom Scan" is especially useful when I want to check just certain folders on my system.

The fact that ***SUPERAntiSpyware Professional*** also scans the memory items and the registry makes this an even more valuable addition to my Anti-Malware Arsenal.

One final feature that really appeals to me is the Blog and Forums sections of the [***SUPERAntiSpyware*** website](#) that are current and easy-to use. Even the novice PC user can understand and participate as he/she wishes.

For the more advanced user, and a favorite for me, are the "Definition Database" and "Threat Research" sections of the [website](#). The database shows what protection for which malware was included in the Updates. The latter section is a list of known malware, which when you click on one, shows you more details about that threat.

So, what are you waiting for? Get your copy of ***SUPERAntiSpyware Professional*** today.

To make that easier for the readers of my website, I have a very special Introductory Offer. *SUPERAntiSpyware Professional* retails for $29.95, but you can get a copy for only $19.95 by [clicking here](#).

Happy Computing,

The Computer Tutor
